

PARITY

COLLECTION / WORKING DIRECTION

Value is not an intrinsic visual property. It is something we learn to assign.

PARITY begins with a simple question: what makes us perceive one material as more valuable than another? The collection brings together components associated with different contexts and different cultural hierarchies of value. Industrial hardware, anodised aluminium, metal structures and faceted stones are allowed to retain their own visual language.

The intention is not to disguise an ordinary component until it resembles traditional jewellery. Instead, the pieces place these materials within the same object and allow the contrast to remain visible.

COLLECTION PRINCIPLE

industrial / ornamental standard / singular utilitarian / decorative
component + component + component → jewellery

01 / CLAMP

GARGANTILLA 01

A faceted stone held by a connection that refuses to pretend it is anything else.

CLAMP is the first documented piece in PARITY. Its focal element places a faceted pink stone directly within visible industrial hardware. The screw thread and nuts are not concealed or transformed into a conventional jewellery setting. The mechanical connection remains legible.

Around it, pink/fuchsia anodised aluminium rings repeat along a curved metallic structure. Colour creates continuity between the stone and the aluminium, while their material associations remain deliberately different.

The result is not about deciding which material is 'better'. It is about placing elements that are not usually granted the same status inside the same piece.

The stone and the hardware do not arrive with the same perceived value.

CLAMP makes them occupy the same object.

CURRENT TECHNICAL RECORD

Piece	Neckpiece / Gargantilla 01
Collection	PARITY
Piece name	CLAMP
Confirmed material	Pink/fuchsia anodised aluminium
Visible elements	Silver-coloured metallic structure, visible hardware, faceted pink/fuchsia stone
Pending confirmation	Exact stone, tubular metal, hardware material, fabrication and assembly techniques, dimensions, year, context

Status: first documented piece of an open jewellery family. Collection narrative, hierarchy and final case-study structure remain provisional until the remaining pieces are reviewed.
